PRISM-A

Alcohol Brief Interventions (ABIs) for male remand prisoners: an MRC complex intervention framework development and feasibility study

Jennifer Ferguson
INEBRIA 2017
New York University

PRISM-A Team

Principle investigator:

Professor Aisha Holloway, PI, <u>Aisha.Holloway@ed.ac.uk</u>

Co-Investigators:

Professor Dorothy Newbury Birch, <u>d.newbury-birch@tees.ac.uk</u>

Mr Richard Parker, <u>Richard.Parker@ed.ac.uk</u>

Professor Aziz Sheikh <u>Aziz.Sheikh@ed.ac.uk</u>

Research Assistants:

Jennifer Ferguson, Jennifer.ferguson@tees.ac.uk - Teesside University

Dr Sarah Landale, <u>Sarah.Landale@ed.ac.uk</u> – The University of Edinburgh

PRISM-A:

To explore the feasibility and acceptability of an Alcohol Brief Interventions (ABI) for adult male remand prisoners:

- The research aims to develop an ABI acceptable for delivery to male remand prisoners identified as drinking alcohol at a level that is or has caused them harm (harmful or hazardous consumption)
- The study will also measure how feasible it is to deliver this intervention to male remand prisoners
- The ABI will be developed through questionnaires and in-depth interviews with male remand prisoners in a Scottish prison and English prison, and with focus groups of prison staff and other key stakeholders
- From the data collected we will use intervention modelling to refine and develop an acceptable ABI

Reply slips & information leaflets are given to new prisoners at induction

The study is briefly explained to prisoners

The reply slip is filled in

Researcher picks up the reply slips

All YES reply slips identify which prisoners are brought one at a time to researcher

Researcher explains study again & checks they have received information leaflet Consent form is then filled in by the prisoner with the researcher explaining it Survey is then carried out by a researcher

GP letters are sent out to doctors surgeries

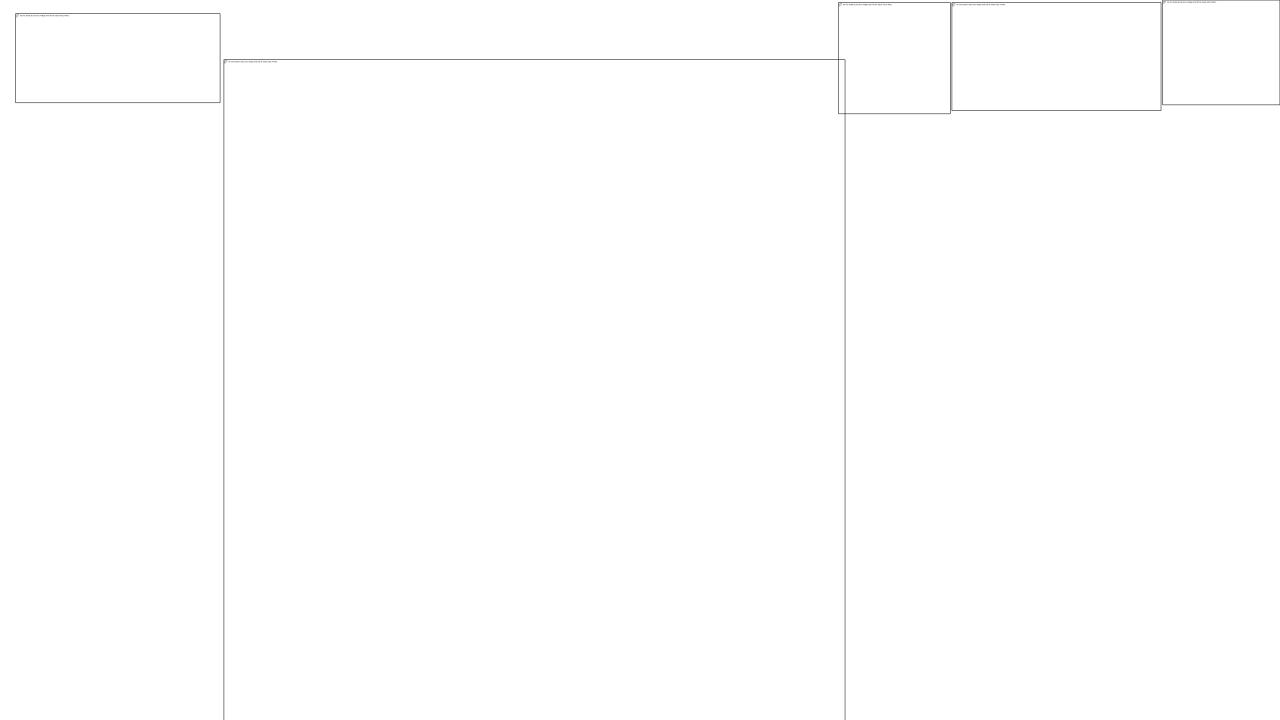

Facilitators and barriers to recruitment

FACILITATORS	BARRIERS
Supportive management of PRISM-A (Both sites)	NOMS ethical approval (England)
Good peer prisoner system (Both sites)	Security clearance for digital recorder (England)
 Researchers being flexible to fit around regimes and staff workloads (Both sites) 	 Working environment desk set out on the wing (England)
 A good communication strategy from management downwards (England) 	PVG clearance (Scotland)
Having prison keys (England)	 Multiple varied regimes across prison meant limited opportunities for doing research (Scotland)
 High intake of prisoners every day ensured plenty of participants (England) 	 Getting round prison without keys very time consuming (Scotland)
Scottish Prison Service ethical approval (Scotland)	 High number of staff with limited access to emails meant PRISM-A awareness was often limited (Scotland)
	Varying levels of support among gatekeepers (Scotland)
	 No reply slips from prisoners refusing to do a survey (Scotland)

Eligibility and consent rates

	ENGLAND	SCOTLAND	
Data collection dates	June – October 2016	June – November 2016	
Number invited to take part	329	457*	
Ineligible	15 (5%)	51 (11%)	
Eligible but refused consent	24 (8%)	122 (30%)*	
Consented but moved wing	40 (14%)	0	
Consented but left prison	1 (<1%)	27 (10%)*	
Withdrawals part way through with no data	4 (1%)	0	
recorded			
Number eligible and consented and	245 (74%)	257 (56%)	
providing questionnaire data for analysis			
Number on remand	114 (47%)	151 (59%)	

^{*} The differences in these figures at each site likely to reflect the two different methods of recruitment process and prison systems

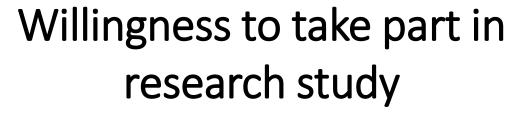

AUDIT RESULTS

	England	Scotland	Overall
	(n=244)	(n=252)	(n=496)
Abstainers (AUDIT score 0)	17 (7%)	12 (5%)	29 (6%)
Low Risk (AUDIT score 1-7)	24 (10%)	41 (16%)	65 (13%)
Negative AUDIT score (<8)	41 (17%)	53 (21%)	94 (19%)
Positive AUDIT score (8+)	203 (83%)	199 (79%)	402 (81%)
Hazardous drinking (AUDIT score 8-15)	71 (29%)	58 (23%)	129 (26%)
Harmful drinking (16-19)	35 (14%)	30 (12%)	65 (13%)
Probable dependent drinking (20+)	97 (40%)	111 (44%)	208 (42%)

AUDIT RESULTS

	Prisoner group					
	Sentenced (n=235)			Remand (n=261)		
	England (n=131)	Scotland (n=104)	Overall (n=235)	England (n=113)	Scotland (n=148)	Overall (n=261)
Abstainers (AUDIT score 0)	10 (8%)	7 (7%)	17 (7%)	7 (6%)	5 (3%)	12 (5%)
Low Risk (AUDIT score 1-7)	15 (11%)	15 (14%)	30 (13%)	9 (8%)	26 (18%)	35 (13%)
Negative AUDIT score (<8)	25 (19%)	22 (21%)	47 (20%)	16 (14%)	31 (21%)	47 (18%)
Positive AUDIT score (8+)	106 (81%)	82 (79%)	188 (80%)	97 (86%)	117 (79%)	214 (82%)
Hazardous drinking (AUDIT score 8-15)	51 (39%)	28 (27%)	79 (34%)	20 (18%)	30 (20%)	50 (19%)
Harmful drinking (16-19)	13 (10%)	15 (14%)	28 (12%)	22 (19%)	15 (10%)	37 (14%)
Probable dependent drinking (20+)	42 (32%)	39 (37%)	81 (34%)	55 (49%)	72 (49%)	127 (49%)
